WHEREAS, according to the Center for Disease Control and Prevention, there were 184 new lung cancer cases and 135 deaths because of lung cancer between 2013 and 2017 in Marshall County; Whereas, the 5-year survival rate for localized lung cancer is about 59%, yet only about 17% of lung cancers are diagnosed at this stage;

WHEREAS, screening for lung cancer for high-risk individuals using low-dose computed tomography can lead to the earlier detection of lung cancer and save lives, reducing the mortality by 20% when compared to screening by chest x-ray in the National Lung Screening Trial and reducing the risk of death at 10 years by 24% in men and 33% in women as demonstrated by another large randomized trial;

WHEREAS, funding for lung cancer research trails far behind funding for research of many other cancers, and additional research is needed in early diagnosis, screening, and treatment for lung cancer as well as in lung cancer affecting women and lung cancer health disparities;

WHEREAS, women diagnosed with lung cancer are more likely to be younger and never-smokers, lung cancer incidence and mortality rates in women are rising relative to men, and more women die from lung cancer than breast cancer every year and by 2035, when it is expected that more women will die from lung cancer than men;
